

THE RIGHT SCREW FOR EVERY GYPSUM BOARD

PROSCREW™

Drywall Screws

Drywall screws fasteners & fixers

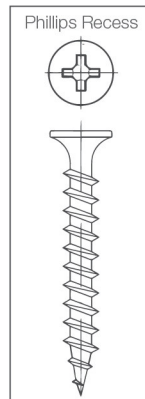

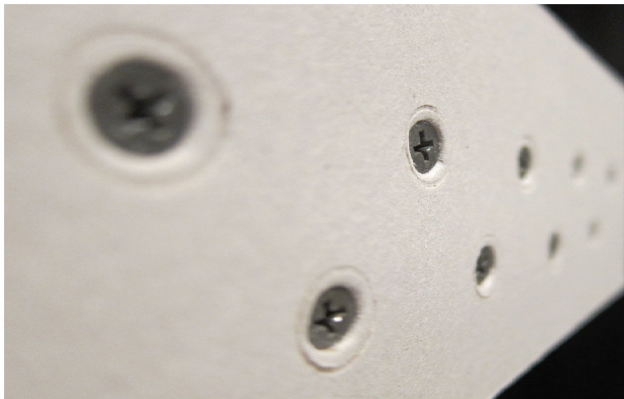

PROSCREW™

ProScrew™ are Fine Thread Screws which are especially designed for fixing Gypsum Board to metal studs.

Fine Thread Arish drywall screws are designed for fixing Gypsum Board to metal studs. ProScrews are threaded along their entire length and are self-threading, which allows them to bite into the gypsum board paper, pulling the board tight up to the

underlying support. Special Bugle head with Phillips recess allows the screw to be driven without damaging the board surface and to ensure flush finish. ProScrews are phosphate-treated and thus provide the necessary corrosion protection.

PRODUCT SPECIFICATIONS:

PENETRATION DEPTH	Ensure a minimum penetration of 10mm into metal framing, through the board.
NEEDLE DEPTH	Bugle Head, it helps the screw stay in place, without tearing all the way through the outer paper layer to ensure flush finish.
POINT TYPES	Self drilling tips/sharp point, it makes it easier to stab the screw into the drywall paper and get the screw started.
THREAD TYPES	Fine thread, it is the better choice when using metal studs.
RECESS	Phillips #2, it allows the screw to be driven without damaging the board surface.
FINISH	Grey Phosphate, it provides necessary corrosion protection.
